Indicative Terms

For illustration only. Not an offer. Fictional underlyings and issuer.

Product	Phoenix autocall
Underlying(s)	European bank, Luxury goods (worst-of)
Issuer	Illustrative issuer, rated A
Notional	EUR 1,000,000
Issue price	100%
Maturity	5 years
Coupon	13.23% p.a., paid quarterly
Coupon barrier	60% of initial level (memory effect)
Autocall	From year 1, early redemption at 100% on any observation date where the worst-of is at or above 100%
Capital at maturity	100% if the worst-of is at or above 60%; otherwise 100% x final worst-of performance

Client scenarios (per 100 invested)

Scenario	Redeemed after (years)	Coupons received (%)	Capital returned (%)	Total received (%)
Steady rise to 130%	1.0	13.2	100.0	113.2
Slow decline to 75%	5.0	66.2	100.0	166.2
Dip to 55%, then recovery	5.0	66.2	100.0	166.2
Crash to 40%	5.0	43.0	40.0	83.0

Model indications (Monte Carlo, risk-neutral): expected life 3.2 years; probability of a capital loss 37%; average loss when there is one 63%.

Main risks

Capital loss if the barrier is breached at maturity, potentially total. Issuer credit risk: payments depend on the issuer's ability to pay. Early redemption risk: an autocall ends the coupons. Secondary market prices can be well below 100 before maturity. Coupons are not guaranteed.
